

Inderjit Singh

AI Automation Engineer (6+ Years)

Phone : +91 (819)-490-3010

E-Mail : singh9inder@gmail.com

(n8n, Zapier, Make & GHL Expert | Voice, Chat Agents, LangChain & RAG Specialist)

Profile

I am a versatile Full Stack and Automation Developer who can quickly understand problems and transform them into intelligent, automated solutions. I develop AI workflows, voice agents, and chatbots using n8n, Zapier, and GoHighLevel (GHL) that save time and automate manual tasks. I'm good at handling end-to-end development, improving workflows, and making sure everything runs smoothly. I learn fast, solve problems efficiently, and deliver reliable results even in fast-moving projects involving automation, API integrations, and AI systems. I work well with teams and clients, and I focus on clear communication. My goal is always to create solutions that are simple, effective, and easy to maintain.

KEY SKILLS

- **AI Workflow & Automation (n8n + Zapier + GHL)** - Expert in building complex AI-driven workflows using n8n, Zapier, and GoHighLevel (GHL) including lead routing, CRM automation, AI agents, and multi-app orchestration. Skilled in debugging, testing, and ensuring high workflow reliability. Hands-on experience with AI voice agent workflows, lead qualification automations, appointment booking flows, WhatsApp/SMS/email automation, pipeline updates, tagging, and webhook-based triggers in GHL. Built multi-step AI pipelines integrating OpenAI, Claude, Gemini, VAPI, and ElevenLabs within n8n and Zapier workflows.
- **API Integration & Automation Architecture** - Deep understanding of REST, GraphQL, gRPC, and Webhooks. Skilled in handling OAuth2, API Keys, and JWT for secure authentication. Experienced in integrating SaaS platforms such as Google APIs, AWS, Azure, HubSpot, Salesforce, etc. Practical experience integrating GoHighLevel (GHL), Zoho, Stripe, PayPal, Twilio, VAPI, QuickBooks, Shopify, and custom internal APIs for automation-first architectures.
- **Custom n8n Node Development (JavaScript/TypeScript)** - Strong experience building custom nodes from scratch, extending existing n8n functionalities, and integrating complex third-party APIs using reusable, modular, and well-documented code. Published and maintained custom nodes for API integrations, data normalization, AI processing, and automation utilities.
- **Backend Logic & Systems Integration** - Proficient in connecting workflows to SQL/NoSQL databases, cloud storage systems, CRMs, messaging platforms, and custom backend services. Experience integrating AI workflows with Twilio voice, WhatsApp, email systems, CRM pipelines, payment gateways, and document processing services.
- **Workflow Monitoring, Debugging & Optimization** - Strong ability to troubleshoot automation bottlenecks, improve performance, optimize execution time, and ensure fault-tolerant automations. Implemented retries, error branches, alerts, long-running workflows, and performance tuning for high-volume

- **DevOps & Deployment Skills** - Familiar with Docker, Git, CI/CD pipelines, environment management, and scalable workflow deployments. Experience deploying self-hosted n8n instances, managing environment variables, webhook security, workflow versioning, and production monitoring.
- **Collaborative Engineering** - Experienced in working with product teams, analysts, and developers to convert business requirements into scalable automation infrastructure. Comfortable collaborating with frontend, backend, and CRM teams to align AI workflows, voice agents, and automation logic with business processes.
- **Database & Queueing Knowledge (Highly Favourable)** - Working knowledge of PostgreSQL/MySQL, Kafka, SQS, and Pub/Sub for building reliable, event-driven workflow systems. Used databases for workflow state management, AI memory storage, CRM synchronization, logging, and automation audit trails.
- **automation systems.**
- **Database & Queueing Knowledge (Highly Favourable)** - Working knowledge of PostgreSQL/MySQL, Kafka, SQS, and Pub/Sub for building reliable, event-driven workflow systems. Applied queue-based and event-driven patterns for webhook ingestion, background processing, and AI task orchestration.
- **Open-Source Mindset** - Comfortable contributing to n8n community resources, custom extensions, and shared automation best practices. Actively follow n8n ecosystem updates, reusable workflow patterns, and automation design best practices.

Workflows I Have Built & Delivered

- **API-to-API integrations** (REST, GraphQL, Webhooks)
- **Lead routing & enrichment workflows** (Clearbit, Apollo, Google Sheets)
- **Voice agent workflows** (Twilio → AI model → Actions → CRM update)
- **ETL pipelines** (Extract → Transform → Load between apps/sheets/databases)
- **E-commerce automations** (Shopify → ERP → QuickBooks → Google Sheets)
- **Webhook-based event workflows** (payment events, form submissions, scheduling)
- **User onboarding workflows** (account
- **CRM automations** (HubSpot, Salesforce, GHL, Zoho, Pipedrive)
- **AI automation workflows** (OpenAI, Claude, Gemini, VAPI, ElevenLabs)
- **Database sync workflows** (PostgreSQL, MongoDB, Supabase, MySQL)
- **Google Workspace automations** (Sheets, Drive, Gmail, Calendar)
- **File processing workflows** (PDF parsing, XLSX reading, CSV normalization)
- **Slack/WhatsApp/Email notifications** (automated alerts & reporting)
- **Retry, error-handling, and long-running workflows**

creation, email sequences, tagging)

- **Custom n8n nodes for third-party APIs**
- **Multi-step AI + automation pipelines**
(voice → text → actions → logs)

AI & LLM Skills

OpenAI, Claude, Google Gemini, LangChain, LangGraph, RAG, AI Agents, Prompt Engineering, Embeddings, Vector Search, Function Calling, Tool Calling, Chatbots, Voice Agents, Conversational AI, AI Workflow Automation, WhatsApp Business API,.

Vector Databases:

Pinecone, Chroma, Weaviate, Qdrant, Supabase Vector, PostgreSQL pgvector.

Automation Platforms:

n8n, Zapier, Make.com, GoHighLevel, Airtable Automations, Google Apps Script, Pabbly.

GHL / GoHighLevel automations:

Lead capture workflows, CRM pipeline automation, appointment booking, SMS/email follow-ups, webhook integrations, AI voice/chat agent handoffs, tagging, opportunity creation, and client onboarding automations.

WORK EXPERIENCE

Expandimo Technologies (July 2021 - Present)

Automation Engineer (N8N, Zapier, GHL)

Key Responsibilities:-

- Built automation workflows using n8n, Zapier, GHL and advanced API integrations.
- Designed AI voice agents integrated with Twilio/VAPI for calling, qualification, and CRM updates.
- Experience with ReactJS, Redux, Next, Typescript, Python, JQuery, JavaScript.
- Experience in the Node.js framework to build REST web services.
- Experience with Stripe, PayPal payment gateway integration
- Developed backend logic and AI features following Agile practices.
- Created custom workflows with error handling, retries, and scalable automation logic.
- Automated document processing, data extraction, and chatbot flows using REST APIs.
- Improved workflow reliability with Selenium JS automation and performance tuning.

- Managed databases, logs, and monitoring for smooth automation runs.
- Documented workflows and test artefacts using Jira for clear project tracking

Full Stack Developer (March 2019 - July 2021)

Newton Infotech

RECENT PROJECTS

AI VOICE & CHAT AGENT AUTOMATION SYSTEM

Description: Developed AI-powered voice and chat agents for lead handling, customer support, appointment booking, and CRM updates. Integrated VAPI, Twilio, ElevenLabs, OpenAI/Claude/Gemini, and GoHighLevel to manage inbound calls, qualify leads, trigger follow-ups, update pipelines, and send automated SMS/email responses. Added error handling, fallback logic, logging, and workflow monitoring for reliable production use.

Tech Stack: n8n, GoHighLevel, VAPI, Twilio, ElevenLabs, OpenAI, Claude, Gemini, Webhooks, REST APIs

MULTI-PLATFORM BUSINESS AUTOMATION WORKFLOWS

Description: Built end-to-end workflow automations across n8n, Zapier, Make.com, and GoHighLevel for CRM, sales, marketing, operations, and customer onboarding. Created workflows for lead routing, form submissions, appointment scheduling, data sync, email/SMS follow-ups, payment triggers, reporting, and internal team notifications.

Tech Stack: n8n, Zapier, Make.com, GHL, Google Sheets, Slack, HubSpot, Salesforce, Pipedrive, Airtable, Webhooks

AI DOCUMENT SEARCH & RAG KNOWLEDGE SYSTEM

Description: Built an AI-powered document search system using LangChain and RAG to scan, understand, and retrieve information from PDFs, business documents, and knowledge base files. Implemented embeddings, vector search, prompt engineering, and AI response generation to deliver accurate answers from uploaded content.

Tech Stack: LangChain, RAG, OpenAI, Claude, Pinecone/Chroma, Supabase, PostgreSQL, Python, n8n

E-COMMERCE AI ASSISTANT & AUTOMATION PLATFORM

Description: Developed an AI assistant platform for e-commerce stores to provide product recommendations, customer support, order-related assistance, and automated CRM updates. Integrated Shopify workflows with AI models, product catalogs, customer data, and business rules to create personalized responses and improve customer experience. Your current CV already has a similar AI-driven e-commerce assistant project, so this can be polished and expanded.

Tech Stack: Shopify, n8n, OpenAI, Claude, Gemini, RAG, Supabase, PostgreSQL, REST APIs

CUSTOM N8N NODE & API INTEGRATION DEVELOPMENT

Description: Created custom n8n nodes and reusable automation components for third-party API integrations, data processing, and business logic execution. Built secure API connections using OAuth2, API keys, JWT, REST, GraphQL, and webhooks. Improved workflow scalability, reusability, and maintainability for complex automation use cases.

Tech Stack: n8n, JavaScript, TypeScript, Node.js, REST APIs, GraphQL, OAuth2, JWT

AI-POWERED CRM & LEAD MANAGEMENT AUTOMATION

Description: Built CRM automation systems for lead capture, qualification, pipeline updates, follow-ups, and sales team notifications. Integrated GoHighLevel, HubSpot, Salesforce, Pipedrive, Google Sheets, Slack, WhatsApp, and email tools. Added AI-based lead scoring, auto-replies, appointment reminders, and status updates.

Tech Stack: GHL, HubSpot, Salesforce, Pipedrive, n8n, Zapier, Make, WhatsApp API, Google Workspace

SOCIAL MEDIA & BLOG CONTENT AUTOMATION SYSTEM

Description: Built automated workflows for social media and blog content publishing across multiple platforms. Automated content planning, AI caption generation, blog post creation, image/video processing, scheduling, and publishing. Integrated APIs for platforms such as WordPress, LinkedIn, Facebook, Instagram, YouTube, TikTok, Google Drive, Sheets, and cloud storage. Added approval steps, error handling, retry logic, notifications, and reporting to ensure smooth content delivery.

Tech Stack: n8n, Zapier, Make.com, WordPress, Google Sheets, Google Drive, OpenAI, Claude, Gemini, Canva API, Facebook/Instagram API, YouTube API, LinkedIn API, Webhooks, REST APIs

AI-DRIVEN E-COMMERCE ASSISTANT PLATFORM (MVP)

Description: Developed an AI assistant platform for multiple e-commerce stores with smart product recommendations and customer support. Built a modular backend for product ingestion and AI-generated responses, powered by a RAG system for accurate retrieval. Designed a multi-client setup with separate catalogs, tone settings, and business rules. Added structured logging and clear API documentation for smooth frontend and automation integration.

CUSTOM N8N NODE DEVELOPMENT

Description: Published custom n8n workflow nodes to npm registry extending platform functionality for specialized automation use cases. Developed reusable components for API integrations, data transformations, and business logic processing.

INTELLIGENT DOCUMENT SCANNER FOR CONSTRUCTION PROJECTS

Description: Built an automated document scanning system that processes 200+ construction and engineering files per batch using AI analysis. Created a dual-stage pipeline combining keyword search with deep PDF content scanning for high accuracy. Integrated Pipedrive CRM triggers for automated project readiness checks and developed an AI title block extractor with fuzzy matching. Added dynamic rules via Google Sheets and automated file operations with timestamped folders, SSH commands, and Outlook

notifications. Included strong error handling, rerun logic, and corruption detection to ensure smooth workflow execution.

AI-Powered WhatsApp & Voice Automation System

Description: Developed AI-powered WhatsApp and voice automation workflows with persistent memory, CRM triggers, document scanning, and automated notifications for reliable business communication.

EDUCATION

Bachelor of Computer Application

Punjab Technical University
