Tech

Lead

Professional Summary

Having

15+

years

of

experience

as

a

Softw are

Developer

working

on

Java/Sc ala

and

Micr osoft

Technologies

(.NET).

Strong

Extensiv ely

used

Apache

Spark,

Apache

camel,

Apache

CXF,

Apache

POI,

Apache

Maven,

Ant,

Sbt,

Gradle

Having

good

knowledg e

on

sip/msrp

integration

Used

mysql,

postgres,

mong odb,

Cassandr a,

datastax(graphdb)

Strong

Extensiv ely

Used

Spring ,

Playframe work,

Akka,

GraphQL

Working

experience

on

aws

services

(s3,

ec2,

lambda,

emr,

ecs)

Experience

in

Developing

Web

Applic ations

on

Tomc at,

Micr osoft

IIS,

Jetty

and

Fuse-6.1

Strong

communic ation,

collabor ation

&

team

building

skills

with

proficiency

at

grasping

new

technic al

concep ts

quickly

&

utiliz e

the

same

in

a

productiv e

manner .

Experience

working

with

a

Multicultural al

environmen t

and

Distribut ed

team.

Having

good

Communic ation,

Analy tical

and

Problem

solving

skills.

Technical Skills Languag es: Java, Scala, C#, Python

Applic ation IDE: Eclipse ,IntelliJ, Visual Studio Open Sour ce Project: Apache Camel, Apache Nifi, Apache CXF, Apache Spark, Apache Nutch, Solr, PDFBo x , SVM(Support Vector Machine) Web Frame work: Playframe work, Spring , Akka HTTP, ASP.net Build Tool: Ant, Maven, ivy, Gradle, Sbt Object Persistence Tools: Hiberna te, EJB, Spring JPA. RDBMS: My SQL, Postgres, SQL Server Web/Applic ation Servers : Apache tomc at,Jetty, JBoss Fuse, ServiceMix, Micr osoft IIS. Messag e Broker : Activ eMQ , JBoss AMQ , Rabbit MQ. Cloud Service: AWS(ec2, s3, lambda, ecs, emr), GCP. Bug/Issue- TrackingS ystem Azure DevOps, Atlassian Jira

Source

Management:

SVN,

GitHub,

Bitbucket,

Azure XML Family: XML, XSLT, XQuery,XSD, XPath, XStream, Castor

Projects

1.

Project

Name

—

Fish

Game

Role : Back end Developer Technologies : Java , spring , netty, hibernate Description: Developed a real-time back end infrastructure for an online fish shooting game hosted on casino

platforms,

designed

to

support

up

to

10,000

concurrent

players.

Implemented

asynchronous

processing

for

fish

generation,

bullet

firing

mechanics,

player

balance

updates,

and

dynamic

RTP

(Return

to

Player)

control

via

an

admin

port al.

Additionally ,

created

an

intelligent

robot

server

to

simula te

virtual

players

and

main tain

activ e

tables

during

low

traffic

periods.

2.

Project

Name

—

Convey911

Role: Back end Developer Technologies: Java, Apache Camel, Sip, MSRP Description: Developed a real-time multilingual translation system leveraging Google Cloud, AWS

Translation,

DeepL ,

Azure

Cognitive

Services,

and

LLaMA

models

to

ensure

accurate

and

efficient

cross-language

communication.

The

back end

was

designed

to

dynamic ally

switch

between

providers

based

on

language

support

and

performance.

Additionally ,

integrated

SIP

(Session

Initia tion

Protocol)

and

MSRP

(Messag e

Session

Relay

Protocol)

to

enable

text

and

multimedia

handling

for

911

emer gency

calls.

This

was

further

enhanced

through

integration

with

Com tech  
services  
to  
ensur e  
reliable,  
standar ds-complian t  
routing  
and  
manag emen t  
of  
emer gency  
communic ations

3.

Project

Name:

Beam(<https://github.com/LBNL-UCB-STI/beam>)

Role: Senior Developer Technologies: Java, Scala, Akka Descrip tion: Built upon the Multi-Ag ent Transport  
ation Simula tion Frame work

(MATSim),

BEAM

enhances

its

capabilities

to

support

multithr eaded,

within-da y

simula tions

of

interacting

agents.

This  
allows  
for  
detailed  
analyses  
of  
various  
transportation  
modes,  
including  
on-demand  
mobility  
services,  
mode  
choice  
decisions,  
parking  
selection,  
and  
discretionary  
trip  
planning.

The  
framework's  
adaptability  
enables  
integration  
with  
other  
models,

such

as

activity -based

travel

demand

models

and

vehicle

ener gy

consump tion

models,

facilit ating

compr ehensiv e

studies

in

transport ation

and

ener gy

domains

2.

Project

Name:

TheAut opartsShop.c om

Role

:

Tech

Lead/Pr oject

Architect

Technologies: Scala, spark, playframe work, Akka, GraphQL , ETL, Cassandr a Descrip tion: This applic ation is designed for the U.S. auto parts indus try. It processes data from various

sources

and

formats,

performing

ETL

(Extract,

Transform,

Load)

operations

to

standardize

and

structure

the

information.

The

refined

data

is

then

indexed

in

Apache

Solr,

enabling

efficient

search

and

retrieval.

Microservices

are  
built  
on  
top  
of  
Solr  
to  
provide  
scalable  
and  
high-performance  
access  
to  
the  
data.

3.

Project

Name:

Bitcoin

Wallet

Role: Senior Developer Technologies: J2ME, Block chain, Ethereum Description: Migrated a Python-based Bitcoin wallet to J2ME by implementing  
lightweight

cryptographic

functions,

transaction

signing ,

and

secure

key

management

using

Bouncy

Castle.

Optimized

networking

with

HTTP-based

block chain

API

integration

and

designed

a

resource-efficient

storage

system

using

RMS

for

private

key.

4.

Project

Name:

Bureau-Connector

Role: Senior Developer Technologies: Apache camel, jboss- fuse 6.2, Spring , Apache CXF, Spring-Mongo, Maven, Apache log4j, MongoDB, Apache Tomcat, XSLT, XStream. Description: Bureau-Connector is a multi-tenant REST-based application that processes

requests

by

querying

multiple

credit

bureaus

across

different

countries.

It

stores

results

in

a

database

to

optimize

future

requests,

reducing

response

time

and

cost

by

minimizing

redundant

bureau

calls.

5.

Project

Name:

Sales force-Connect or

Role: Senior Developer Technologies:

Spring,

apache

camel,

jboss-fuse

6.2,

Apache

CXF,

Maven,

Apache

log4j,

MongoDB,

XSLT, Castor Description: : Sales force-Connect or is an application for efficient data synchronization with

Sales force.

Optimized

API

usage

through

profiling

and

implemented

metadata

caching

to

reduce

consumption

while

improving

data

pull/push

performance..

6.

Project

Name:

PDF

Classification

Role: Java Developer Technologies: Apache Camel, Spring , Maven, Apache log4j, XSLT, XQuery, JBoss Fuse, JBoss AMQ , Zxing Description:

PDF

Classification

processes

PDFs

by

extracting

barcodes

using

ZXing

(via

Camel-Barcode).

If

a

barcode

is

detected,

the

document

is

converted

to

a

Base64-encoded

binary

and

sent

to

the

application

7.

Project

Name:

Adobe

ESign

Role: Java Developer Technologies: Apache Camel, Spring , Maven, Apache log4j, XSLT, XQuery,JBoss Fuse,

JBoss

AMQ ,

mongodb

,

adobe

esign

Description: Implemented eSign workflow to send PDF documents to recipients via email,

following

the

Observer

pattern

for

tracking

status.

Automatically

downloads

the

signed

document

to

a

designated

location

upon

completion.

8.

Project

Name:

Multiclient

Role:

Senior

Developer

Technologies:

Apache

Camel,

Spring ,

Maven,

Apache

log4j, XSLT,

XQuery, JBoss

Fuse,

JBoss

AMQ

Description: Multiclient is a flexible framework designed to support multiple clients with similar

functionalities.

It

dynamic ally

adju s ts

reques ts

based

on

clien t-specific

requir emen ts

and

includes

services

for

loan

processing.

The

frame work

streamlines

onboar ding

for

new

tenan ts

through

configur able

XML-based

reques t/response

mappings.

9.

Project

Name:

LLRMPC

Account

Manag emen t

System

Role:

Developer

Technologies: Eclipse, Servlets, Jsp, Struts, Maven, Hiberna te Descrip tion: Developed an intranet-based accounting automa tion system for a Punjab engineering

colleg e

to

digitiz e

financial

workflo ws

and

enable

centralized

emplo yee

collabor ation.

The

platform

streamlined

adminis trative

tasks

including

studen t

registration,

enrollmen t,

fee

manag emen t,

attendance

tracking ,

and

document

verification,

ensuring

seamless

data

access

and

reducing

manual

errors.

Built

for

secure,

role-based

access

to

safeguard

200+

staff

and

4,000+

student

records.

10.

Project

Name:

Filesclip

Role: Developer Technologies: JSP, Servlet, Spring , JDK1.6, MySql, Apache Tomcat, Apache Nutch

Description: Filesclip was a vertical search engine focused on domain icons, scraping icon links and descriptions

from

websites.

It

used

Nutch

for

link

extraction

and

Solr

for

indexing,

enabling

efficient

search
